

Accurate occlusion

Repeatable occlusion to help you properly perform and evaluate occlusal reduction of all preps as outlined in texts.

Improved tooth anatomy

Right out of the box the ModuPRO One can be used to reference tooth anatomy and is similar to that of the text. Expect broader proximal contacts occlusal gingivally, improved facial-lingual contacts, and central grooves that align. Proximal contact is maintained upon making your class II box.

ModuPRO[®] One

Accurate occlusion, new and improved textbook tooth anatomy, and consistent replacement teeth.

Often acclaimed for its product quality, industry leading designs, and technological innovations, Acidental has available the elegant 32 tooth ModuPRO One for restorative education. The ModuPRO One features new and improved tooth anatomy, accurate occlusion, predictable fit of all replacement teeth, and life-like simulated soft gingiva.

The ModuPRO One arch is designed to attach to Acidental's universal Carrier Tray[™] magnetically. To replace teeth, simply pull the arch from the Carrier Tray and unscrew the particular tooth. Once the tooth is replaced, you can be assured that the proximal contact will be similar to that of the original tooth, marginal ridges will match, and the occlusion will be in the same manner as that of the initial model. Because the replacement teeth are produced in the USA, you can be confident that the teeth will have outstanding quality.

With the ModuPRO One, the end user can interchange with other disciplines, including endo, pedo, perio, and licensure using the magnetic Carrier Trays[™].

Accurate replacement teeth

Each replacement tooth fits the same as the tooth that was installed in your original model, meaning that marginal ridges and proximal contacts are maintained.

Ordering and Replacement Items

**ModuPRO One
w/ adjustable articulator**
Item # MP_R320

Includes innovative self-adjusting articulator for effortless calibration and lateral and protrusive movement. Packaged in a durable professional aluminum case for transporting ease.

ModuPRO One | Manikin
Item # MP_R310

Designed to fit to the most common simulation systems where a hinged articulator is not necessary. Packaged in a durable professional aluminum case for transporting ease.

ModuPRO One | Refill Kit
Item # MP_R300

The ModuPRO One Refill Kit conveniently fits onto your existing magnetic Carrier Trays.

**ModuPRO One
Replacement Maxillary
Soft Gum**

Item # MP_S01-16

ModuPRO One maxillary replacement soft-gum base. Ready for installation of M300 Series teeth.

**ModuPRO One
Replacement Mandibular
Soft Gum**

Item # MP_S17-32

ModuPRO One mandibular replacement soft-gum base. Ready for installation of M300 Series teeth.

**ModuPRO One precision
replacement teeth**
Item # MP_M300_XX

While each M300 tooth are precisely installed at our factory via automation, all 32 ModuPRO One M300 Series teeth can be individually replaced.

Teeth fit the same as the teeth that were accurately installed with your original ModuPRO One model.
